

Master mention Santé publique

EHESP School of public health,
Université Rennes 1, Université Rennes 2

The EHESP School of Public Health offers, in collaboration with the Universities of Rennes 1 and 2, a high-level, multi-disciplinary and multi-specialized Master of Public Health. Graduates can pursue careers in project management or research, public health expertise, executive and senior public health management in health and social welfare institutions, communities, regional health authorities, local or national governments, and in the private sector (for profit and non-for-profit). Graduates can also continue their training at PhD level, within the numerous research teams contributing to the Master or in French or international research organizations.

Public Health, through its population-based approach, requires a multidisciplinary health workforce, trained by the proposed course pathways. The pathways are organized according to major public health fields :

- determinants of health (environment, work, behavior, risk related to the health care system)
- populations (youth and people with disabilities)
- policies and organizations
- use of health technologies (massive data).

The Master offers a progressive specialization:

- Year 1: students can choose for their first year of the Master course between a quantitative or a social sciences and management orientation; both options share a common core of public health foundations.
- Year 2: students can choose between respectively 4 or 8 specialized programs (see figure, in French).

Organisation générale Master Mention Santé Publique (2017-2021)
